SUMMARY

Full-stack software engineer with over a decade of professional experience, strongest in React and TypeScript. I've worked across product engineering, internal platforms, automation, and AI-powered tools. Most of my roles have leaned frontend, but I'm comfortable shipping across the stack.

EXPERIENCE

FREELANCE | TECHNICAL CONSULTANT

Remote | May 2025 - Present

- Served as technical advisor to Bore Finance, a tokenized private equity protocol that later raised \$2.5M to deploy into SME acquisitions.
- Competed independently with Mercantill at the Solana Cypherpunk Hackathon (Oct 2025), placing 4th in the Stablecoins Track and winning \$13,750 across three prizes.
- Built an automated web scraper using Playwright and Bun to extract Canadian real estate listings into Google Sheets, cutting manual data entry by 90% and enabling real-time rental market tracking.

CAREER BREAK

Sep 2023 - Apr 2025

ABNORMAL AI | SOFTWARE ENGINEER

Remote | Oct 2022 - Aug 2023

- Built a self-contained React component library of 30+ components using React Aria, TailwindCSS, twin.macro, and TypeScript, bundled with Vite, enabling a full migration away from Ant Design across product teams.
- Led front-end development for Knowledge Bases and Security Posture Management, shipping both on time for a high-profile RSA Conference launch.

SHOPIFY LOGISTICS (FKA DELIVERR) | SOFTWARE ENGINEER

Remote | Apr 2021 - Oct 2022

- Built a React & Redux real-time order tracking app for 5M+ buyers, giving customers a unified view of orders shipped from multiple warehouses ahead of Black Friday.
- Implemented zip code-level sorting for warehouse associates, replacing city-level granularity and improving package routing efficiency.
- Integrated 6 last-mile carriers, including DoorDash, expanding the fulfillment network ahead of peak season.
- Delivered 6 shared components adopted across 5 product teams, supporting environments ranging from Internet Explorer to Android warehouse scanners.

WORKDAY | SOFTWARE APPLICATION ENGINEER

Vancouver, BC | Aug 2018 - Jan 2021

- Served as one of four frontend leads for the product pillar, despite being the only non-senior engineer in the role, helping set component API design and code review standards later adopted across the org.
- Owned WAI-ARIA compliance and responsiveness for Talent Marketplace and Career Hub, unblocking both launches in time for Workday's bi-annual release window.
- Designed and ran a React onboarding program that transitioned 20+ engineers from Angular in a single week.
- Built a React & Redux prototype showcased to 15,000+ attendees at Workday Rising, sparking org-wide discussion about frontend architecture and direction.

ASSISTLIST | SOFTWARE ENGINEER (VOLUNTEER)

Vancouver, BC | 2016 - 2017

- Rebuilt the frontend for a Vancouver nonprofit focused on second-hand medical equipment exchange, migrating the product from a Rails monolith to a React single-page application.
- Designed and implemented a multi-step listing flow to simplify the most painful part of the user journey and support more complex submissions.
- Delivered a maintainable frontend foundation that has remained live since 2017 and continues to support 20+ new listings per day.

COMMUNITY & LEADERSHIP

SUPERTEAM CANADA | VANCOUVER LEAD & TECHNICAL MENTOR

Vancouver, BC | Jul 2025 - Present

- Led the Vancouver chapter of Superteam Canada, one of three Canadian hubs alongside Toronto and Montreal, growing regular attendance from 10 to 20+ working professionals within three months through monthly events, co-working sessions, and mentorship.
- Mentored teams that placed at the Solana Cypherpunk Hackathon (Oct 2025): 2nd place in the RWA Track (Bore Finance) and an honourable mention in the DeFi Track (Condor Trade), helping rank Superteam Canada among the top chapters worldwide.

PENGUIN ROBOTICS | FOUNDING MEMBER

Vancouver, BC | Oct 2015 - Present

- Co-founded Penguin Robotics, a volunteer-run non-profit that became one of the primary organizers of VEX Robotics competitions in BC's Lower Mainland, one of the most competitive VEX regions in the world.
- Ran programming workshops covering everything from fundamentals to PID loop implementation, helping high school teams build the technical depth to compete at a high level.
- Built a web platform for preserving BC competition history, rankings, event operations, and student performance tracking across seasons.

PROJECTS

OPENCLAW CARDPUTER CLIENT

C++, PLATFORMIO, ESP32-S3, OPEN SOURCE | 2026

Full AI chat client for the M5Stack Cardputer (ESP32-S3, 320KB RAM, no PSRAM), built from the ground up in C++ with WiFi, keyboard, audio drivers, a panel-based chat UI, IMU-based wake from idle, Ed25519 device authentication, token-by-token WSS streaming, and OpenAI Whisper voice input. Built in two days and demoed live to 70+ people at a local tech meetup.

MERCANTILL

TANSTACK START, HONO, DRIZZLE, CLOUDFLARE WORKERS, ALCHEMY | 2025

Programmable spend management platform for AI agents where users define spending rules and every settlement decision is logged against those rules. At the Solana Cypherpunk Hackathon (Oct 2025), it placed 4th in the Stablecoins Track among 1,500+ submissions and won two additional cash prizes for a live virtual pitch to judges.

BLOCKSPACE

NEXT.JS, TAILWINDCSS, ELYSIA, POSTGRESQL, REDIS, CLOUDFLARE | 2024

Social news aggregator where shared links become on-chain collectibles. Built on a web scraping pipeline, OpenGraph/OEmbed metadata, and a feed-based UI. More of a curiosity than a product: what if sharing a link meant owning a piece of it?

SKILLS

Languages: JavaScript, TypeScript, Python, C++, HTML/CSS, C#, Java, Go

Frontend: React, Redux, Next.js, TanStack, TailwindCSS, Angular, Storybook, React Aria

Backend: Node.js, Hono, Elysia, PostgreSQL, SQLite, Redis, Drizzle ORM

Infra: Cloudflare Workers, AWS, Docker, Vite, Webpack, Bun, Git, Alchemy

AI: Claude Code, OpenCode, Pi, OpenClaw, Hermes, OpenRouter, Ollama, Whisper

Testing: Jest, Vitest, Playwright, Cypress
